

Objective

Pharmaceutical sciences combine scientific aspects that are critical in the development and manufacture of new drugs, handling of medicines and medical devices. Cancer research is research into cancer to identify causes and develop strategies for prevention, diagnosis, treatment, and cure. Cancer research ranges from epidemiology, molecular bioscience to the performance of clinical trials to evaluate and compare applications of the various cancer treatments. These applications include surgery, radiation therapy, chemotherapy, hormone therapy, immunotherapy and combined treatment modalities such as chemo-radiotherapy. The most prominent area of biotechnology is the production of therapeutic proteins and other drugs through genetic engineering. Pharmaceutical Technology comprises studies on formulation, manufacturing and delivery of drugs which includes the most recent and impactful discoveries of combining innovative formulation science and advanced process technology from the academia to the pharmaceutical and allied industries. In the present conference, experts from diverse international/national organizations will address on cancer research and other pharmaceutical aspects.
